System Overview	2
-----------------------	---

OVERVIEW

The First Evidence GoNoGo Monitor is the main application that allows the user to see what's going on with the LPR Service. At a glance, the user is given a Red/Green (or Go/NoGo) status on all the major components to the system, as well as seeing real-time video and plate readings.

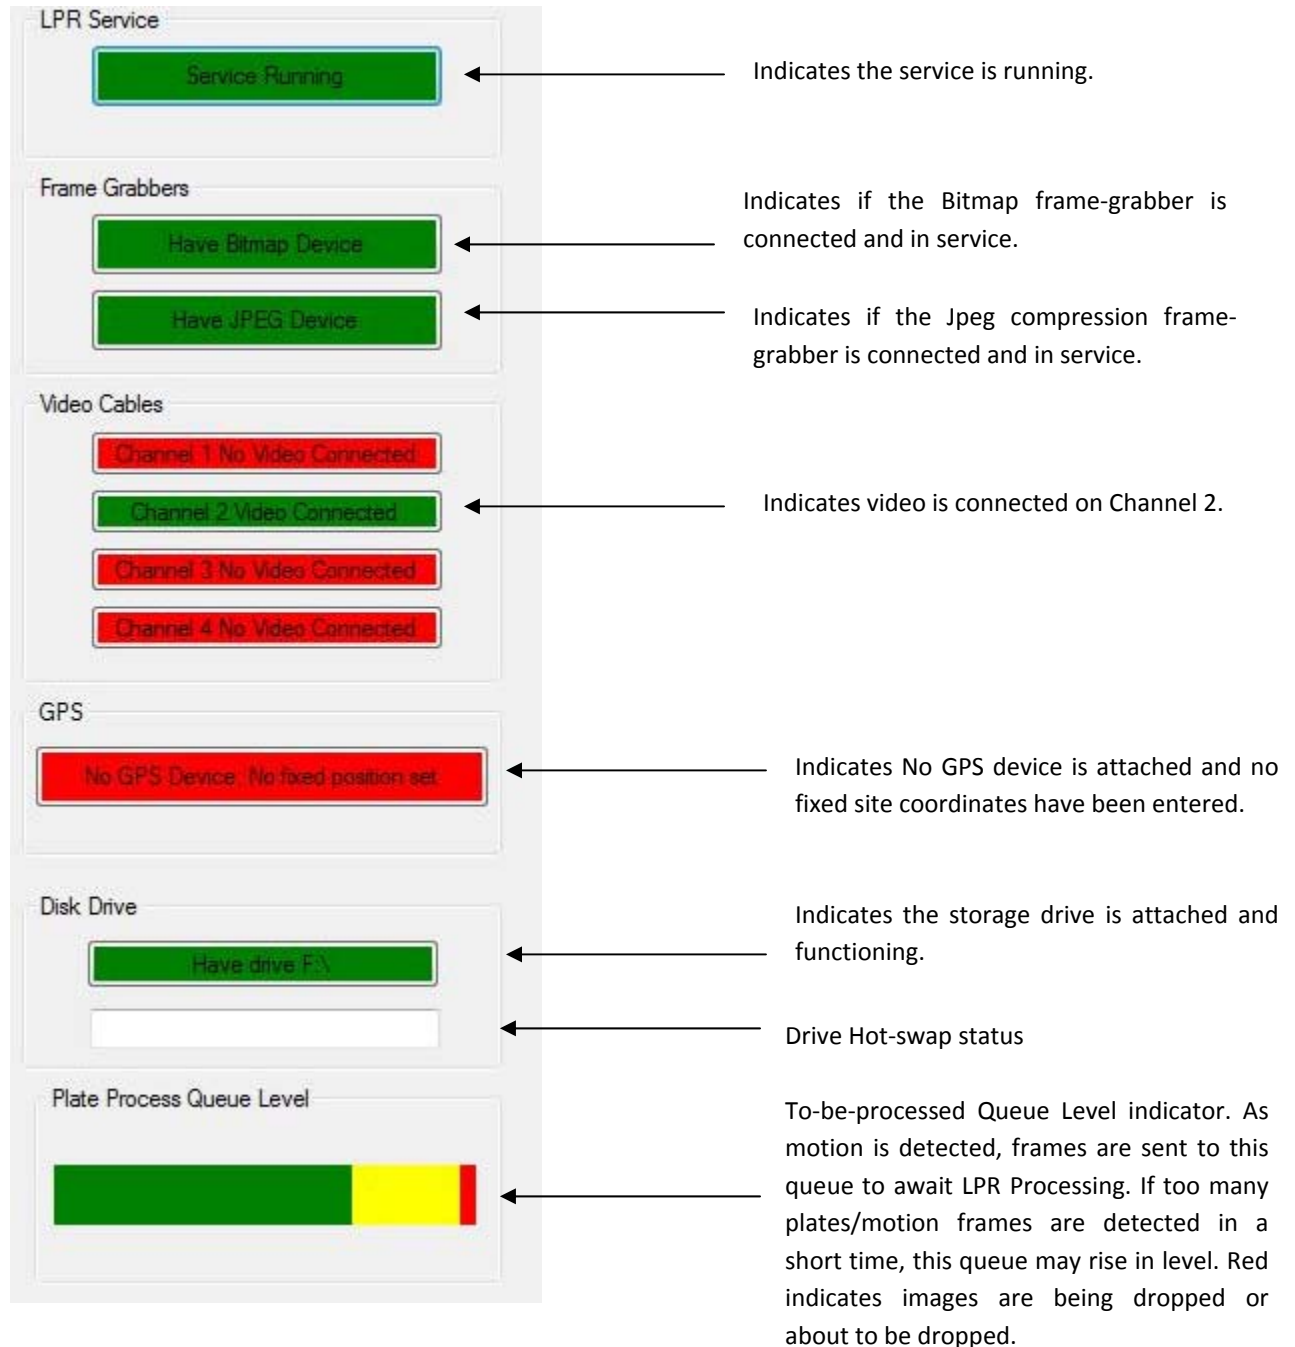

Clicking on one of the four camera images toggles that image between full screen (shown below) and quad-view mode. When in full screen mode, the Save Current Image button appears on the lower left and saves the image that is present at the moment the button is first pressed.

The most recent plate reading.

The time stamp of the most recent image (UTC time).

The small red box indicates the minimum plate size. The large red box indicates the maximum plate size.

Note: the jpeg compression and Bitmap frame-grabber functions may share one single S2255 device.
